The Basic Screening is a general health assessment which detects signs of potential disease or changes in the body not favourable to your health as early as possible. This screening is recommended for all age groups and takes in total about 2 hours to complete.

The Basic Screen starts with a baseline medical assessment measuring main health parameters such as blood pressure, pulse, oxygen levels, etc. and includes a 12 lead resting electrocardiogram, a non-invasive test that can detect abnormalities of your heart.

The screening will finish with a 30 minute doctor consultation to discuss your results and give you further guidance if required.

Basic Health Screening includes:

- Initial Doctor Consultation (30 mins)
- Baseline Medical Assessment
- Resting ECG
- Body Composition Analysis
- Detailed Blood Test
- Urine Analysis
- Follow up Doctor Consultation
